

NO-BAR™ SYSTEM

THE SAFETYZONE™ NO-BAR™ ANCHORING SYSTEM

The SafetyZone™ NO-BAR™ Anchoring System for windows provides practically indestructible protection for your properties—and the people inside them.

Here's how it works: The window pane is coated with SafetyZone 12mil film, and then the NO-BAR mechanical anchoring system attaches the film-covered glass onto the window frame. A decorative, color-coded cap is then applied to match the existing window frame.

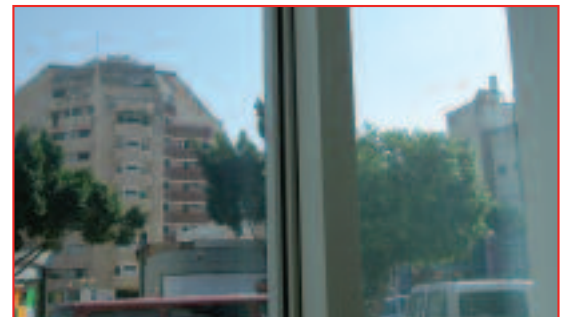

The SafetyZone NO-BAR Anchoring System. Virtually invisible protection you don't have to see to believe—or trust.

THE BENEFITS OF A SAFETYZONE™ NO-BAR™ ANCHORING SYSTEM

- Since the film-covered window panes are anchored to the frames, detachment is impossible—thereby preventing windows from falling into interior spaces and injuring those inside.
- The NO-BAR Anchoring System creates an elastic, durable, resistant surface that's impervious to forces applied to the window by impact or blast.
- The System offers significant resistance to burglary attempts.
- Because no metal bars are used, outdoor views remain unblocked.
- If desired, solar-control properties for heat and glare control can be incorporated into the film.
- The NO-BAR Anchoring System is intended for all window-frame types, including facades.

The No-Bar System provides virtually invisible protection to your storefront's windows.

The No-Bar System's color-coded caps are designed to match the existing window frames, providing a complete OEM look.
